Repair

- To reduce the risk of fire and explosion, repair procedures must be performed in a non-hazardous location. Move system to non-hazardous location before performing any repair procedure. - Follow Pressure Relief Procedure and Shutdown before checking or servicing the equipment. - To prevent contact with fluids, flush the system prior to disassembling any components that contain catalyst or resin.						

1. Remove the non-metallic fittings used on the FRP system and install the stainless steel fittings provided in the conversion kit. See FIG. 1 and FIG. 2.
2. Do not reuse tubing. It is not compatible with the stainless steel fittings. Replace all tubing with new tubing (7, 8) supplied with kit.
3. Check compression fitting seals by pulling on tubing. Tubing should not pull out.
4. Follow **Prime** procedure to verify catalyst flow. See FRP Proportioner manual 3A2012.
